

ARX Stopper

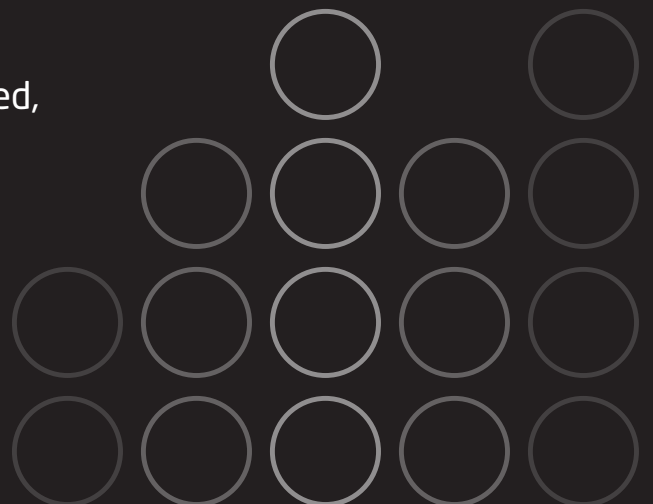

Certified Hostile Vehicle Mitigation (HVM)

Our ARX Stopper is a CPNI and SBD accredited Hostile Vehicle Mitigation (HVM) Product, designed to slow and halt vehicles from progressing into a safe zone so protecting life and assets.

The ARX Stopper is PAS 68 and IWA-14 certified, stopping a 7.2 t truck at 48 km/h.

As a two part product they are easily transported and erected in a very short period of time.

Technical specifications

The product is split into two separate elements which are assembled by simply lifting one part of the body and slotting it into the other.

They can be connected together by means of chains or poles to offer maximum protection to any high security installations or pedestrian areas.

The ARX Stopper is PAS 68 and IWA-14 certified, stopping a 7.2 t truck at 48 km/h.

ARX Stopper is available in two sizes:

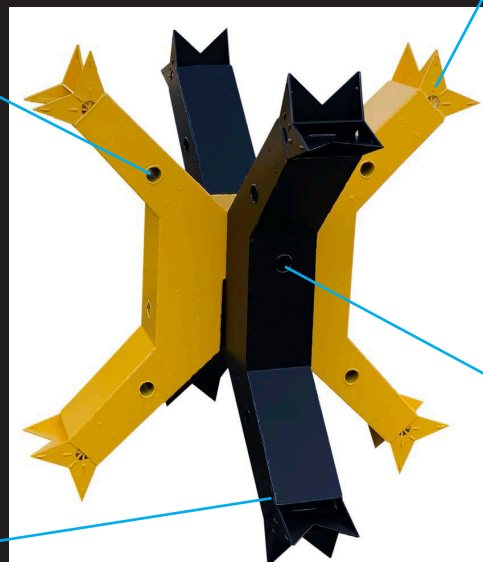

LW Stopper

HW Stopper

Anchor Bar

Anchor bars are situated within the arms of the product, to which a steel rope can be secured by a D-Shackle. This adds extra security and rigidity to the overall build.

Arm

Crown

Each ARX Stopper has arms with crowns situated at the end; if a vehicle comes into contact with the crown of the product, it is designed to tip and penetrate the body or underside of the vehicle to slow it down and eventually halt it.

Securing Bar

A securing bar locks the two elements of the product together by simply sliding straight through the middle of each.
